-Scalloped Apples: Butter a pudding dish and put a layer of peeled sliced apples in the bottom. Sprinkle with sugar, a very little flour and cinnamon and some bits of butter. Fill the dish in this manner and bake one hour, covering the dish to prevent burning on the top. Serve cold or hot .- N. Y. Ledger.

-Sweet Roll: Dry a tablespoonful of flour, and mix it into the same quantity of castor sugar, add a teaspoonful of baking powder. Break two eggs in-to this, and beat all well together. Spread on a flat tin, and bake in a quick oven for five or seven minutes. Turn out on a paper, spread with lemon and curd roll. When cold cut in slices. Leed's Mercury.

-Pudding Sauce: One pint water made into a smooth starch with a heaping tablespoon of flour. Cook ten minnies, strain if necessary, sweeten to taste, and pour on it one tablespoon butter and juice of a lemon or other flavoring. If lemon is not used, add one tablespoon vinegar. This can be made richer by using more butter and sugar; stir them to a cream with the flavoring, then add the starch. These recipes are given by Mrs. Mary Hinman Aber and may therefore be relied on.-Western Rural.

-Cooking Cabbages: A great many people with weak digestion are afraid to eat cabbages of any description. This is a simple means of remedying the matter. Put about the size of an egg of bread crumbs, tied in a fine cloth, in with the cabbages when cooking. Cabbages cooked like this can be used in any possible way, the bread having absorbed all bitter juices, they can not harm, while they are digested quite easily. Another advantage of this style of cooking is that the bread crumbs absorb almost all the smell which usually accompanies the cooking of cabbages.-Leed's Mercury.

-A Veal Pot Pie with Dumplings: Take a scrag of breast neck of veal and cut it into slices an inch thick. Fry out several slices of salt pork in a kettle. Remove the pork, flour the veal and brown it on both sides in the fat. Add hot water just enough to cover the meat. Let it simmer about half an hour, then season it with pepper and salt and dredge in a little flour. Let it cook gently till tender. Dumplings: One cup of flour, one even teaspoonful of baking powder, half a teaspoonful of salt and sweet milk to make a batter stiff enough to drop from a spoon. Drop by the spoonful into the boiling stew. Cover closely to keep in the steam, and cook fifteen minutes without lifting the cover. Take out the dumplings, put the meat again. If the reservoir is small, say into the center of a hot platter and the dumplings around the edge. - Boston Budget.

A WORD OF CAUTION. Never Recommend Your Dressmaker to Friend if You Are Wise.

Unless you are willing to run to the risk of breaking the cordial relations that exist between you and another woman, don't recommend a dressmaker to her notice, for it isn't woman nature to forget the origin of a botched gown, despite protestations to the contrary. It will be readily admitted that a dressmaker who suits one woman to a T, and who has always proved satisfactory to one patron may do nothing to please another. It is always more or less of an experiment, as any woman knows, to try a new hand at one's gowns. The best of dressmakers often fail, just as very often one-dollar-a-day seam-

stresses turn out very creditable pieces of work, and when one entrusts a dress pattern to hands unknown its ultimate fate is a lottery. Enter that lottery unadvised-if you would have no gnawing regrets-let your friends try their luck with no encouragement from you, if you wish to preserve peace of mind

and continued friendship.

The whole question of gown-making is a vexatious one to the one who can not afford to place it in the hands of an unquestioned authority and pay the bills that follow. The woman who knows that it is a necessity for her to employ cheap dressmakers, to be her own designer, to wear bodices with unbound seams and to put on the save the time of hired hands, new dress presents direful possibili-ties that bring wrinkles and nerves in their train. There are women who have settled the matter by patronizing the really excellent ready-made garments now to be had at any of the larger stores, but when one is under five feet in height, and every skirt is designed for a woman five feet five inches, or when one is blessed with abnormally long arms attached to a narrow chest, and even the sleeves of today, big as they are, do no cover the bony wrist, the dressmaker is the only avenue to approach when a new gown is in contemplation. And those of the short stature or the long arms know to a certainty that when they try new pastures there are sleepless nights and hours of worry and bother in store for them.—N. Y. Telegram.

To Relieve That Cough. One's doctor will encouragingly inform one, when struggling back to strength from an attack of grippe: "That cough of yours will have to wear yourself of it before warmer weather." virulence of the throat affection. Glyc- surface and thus prevents the deep erine is excellent as part of a mixture for moistening the dry feeling there. Either with water or with whisky it is beneficial, but the latter dose is rather sickishly sweet for one already nauseated by the influenza. Equal parts of glycerine and lemon-juice make a compound which is not unlike strong lem-onade in taste, is refreshing to take after severe coughing and is highly ended by physicians.—Phila-

AGRICULTURAL HINTS.

FOR DRY COUNTRIES.

How to Construct a Reservoir for Wind mill Irrigation. Wind-pump irrigation will be depended upon more and more whereever the rainfall is apt to be deficient. The accompanying illustration, taken from a photograph, represents a section of one of the many reservoirs in Meade county in southwest Kansas which have been used satisfactorily for some time. The pump is larger than the average in this locality, having a 12inch cylinder, a 12-inch discharge pipe and a 10-inch stroke; it lifts the water 14 feet at the rate of 175 gallons per

The preparation of the reservoir is most important, and in order to assist any who contemplate such an addition to their farm improvements, I will tell how I made mine. Select a site higher

than the ground to be watered. Lay out the reservoir corresponding in capacity to the power of the pump. The pump must be capable of filling it in two or three days. Remove all sod, placing it beyond the limits of the walls. Do not use it in forming the embankment. Then plow and scrape, dumping where the wall of the reservoir is wanted. Continue until the work is completed, driving over the wall. Leave the inside sloping so the waves will not injure it. When the excavation is of the desired size plow the bottom and pulverize thoroughly. Hitch a team to a block, road scraper or other suitable object, turn in the water and begin to puddle by driving along one edge and continuing until the whole surface is puddled.

This will cause a precipitation of sedi-ment which will fill the pores of the soil and enable it to hold water quite well. The bottom will then be 12 to 18 inches lower than the surface of the ground outside, but that much water must always be left in the reservoir to preserve the puddling, for if it gets dry or freezes the work must be done over 30x50x3 feet, some dirt for the wall must be obtained from the outside. An outlet can be made of four 2-inch planks long enough to reach through the wall. Saw the inner end sloping and provide it with a valve made of 2inch board, and on the same principle as the valve in an ordinary pump.-E. D. Smith in Orange Judd Farmer.

NOTES ABOUT HORSES. Horses need to be fattened for

narket. THE colt's education can hardly begin too early. HER owners report Alix in first-class

In country stables there is no excuse for foul odors.

In France old, worn-out horses are converted into chicken food. FOR slow draught upon the farm, road or in the city, the walking gait is the most important. It is important that the colt be

trained to walk well before he is trained to any other gait. WHILE knee action is wasted action so far as speed is concerned, it is now essential for the city markets.

THE partitions between stables should be solid and firm, to prevent possibility of injury to the horses

standing in the stables. In teaching a colt to back never tighten the rein on him. Once let him understand that it will loosen, and he will back for you every time.

PNEUMATIC tires are coming into use in the cities on light vehicles, and india-rabber tires, not pneumatic, on heavier carriages and wagons. HAVE the colt's feet put in shape every few weeks so as to keep them

true and level. When the toes are allowed to become too long there is danger of producing ring-bone. THE English climate is said to be very trying to American-bred horses, giving them throat affections which impair their wind. Those that are

taken over young seem to escape these

Absorptive Power of Soils. The greater prevalence of droughts as the country grows older is partly owing to the fact that soils long cultivated do not hold water as they do when full of vegetable matter. This is especially true where the soil is heavy and has at some time been worked while wet. It often requires years of cultivation with winter freezing and thawing to fully break up the clods made by plowing when the ground is saturated with water. The plow presses particles of clay soil to-gether instead of pulverizing them. If they are harrowed while wet the clay out. You can scarcely expect to rid sticks to the harrow and but little good is done. If the soil is undrained If this is true the least that one can do | these clods will remain for years, as is to mitigate, so far as is possible, the the saturated soil freezes solid at the freezing needed for pulverization. Fall plowing is beneficial for land in this

condition.-Rural World. No dwelling house ought ever to be built near a swamp. If such a one exists either the house should be removed or the swamp should be drained. There are many places where the deep-ening of ditches already made is all that is needed to make dry land fit for cultivation of what has been an eyee to the neighborhood. This making of an outlet is much the most ex- the farm. Pasture lands ought to ing of an outlet is much the most expensive part of the reclamation. It
will improve the neighboring upland
also, for that equally needs under
draining, but cannot get it until a safe
reliable outlet has been provided. All
swampy lands have been for ages the
deposits for vegetable matter from uplands. So soon as the latter is underdrained the water falling on the upland sinks down to the tile and enriches the soll, instead of washing
away its fertility.—Bural World.

MILK FOR THE PIGS.

Good Thing When Fed in Con

There is hardly any doubt that with good management a better profit can be realized in feeding the mille to thrifty growing pigs than to make into butter, take to the country stores and sell at the price usually received, at least during the greater part of the season, and at a considerable saving of time and labor. But in feeding milk to pigs to make the most of it, in nearly all cases it must be fed in connection with something else. From the time the pig is farrowed until it is ready to finish for market, milk can be made its entire food, and later on its principal food. The milk must at first be supplied by feeding the sow with good milk-producing food, and as soon as the pig learns to eat it can be fed milk, and if the sow is fed sloppy foods made up with milk the pig will

fearn to eat much earlier than if corn or grain of any kind is depended upon. But in nearly all cases the best way of feeding milk is in connection with other foods, as it requires too large an amount of milk alone to make a pound of gain in a pig. But made into a slop with middlings and bran, oil meal and bran, or cornmeal and bran, it not only makes a healthy, but an economical food. But even then the lowest cost of growth will not be realized unless, in addition, good pasturage is provided. Give growing pigs the run of a good pasture—clover is always best—and then feed a good milk slop night and morning, and in a majority of cases the best growth at the lowest cost can be realized. And if this is done milk can be sold at a better price, fed in this way to vigorous, thrifty pigs, than will be realized by making into butter at eight or ten cents a pound at the country store, and all of the labor of butter making be avoided in addition. It is true that in a majority of cases the same milk and the same amount of labor spent in making poor butter will, with different management, make butter that will bring two or three times that much.-Prairie Farmer.

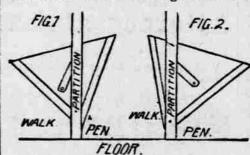

THE KEY TO SUCCESS.

It Pays to Put Things on the Market in Prime Condition. The farmer who is contented with average crops sold in the average condition must expect only average prices. He who produces anything and puts it on the market in prime condition is the one who is going to make sales first and get top prices. The average man comes along later. No matter to make sales or may be had by mail from Dr. Williams' Medicine Company, Schenectady, N. Y., for 50 cents per box, or six boxes for \$2.50. what you have to sell, put it in the best possible condition for market and see to it that you can adopt the same motto that we once saw in a barrel of apples in the east. When the head was taken out of that barrel there was exposed a printed slip which said: "This package was produced and packed by John Smith, who guarantees that when you see the top you see the that he never had any trouble with anything that man sent in, for his reputation had been made. He not only packed his fruit and vegetables in the best manner, but sorted the sizes, and when the package was opened the buyer knew just what to expect from top to bottom. We know a farmer who takes his grain to market and dumps it wherever the buyer tells him to, and is then asked how many bushels he had. His grain is never looked at nor weighed by the man who has weighed it for years; if it is not in good condition he insists on inspection, but if he knows it is all right he unloads and gets his pay. A reputation of that kind is worth more than a good farm, for it brings a greater return. Honesty is not only the best policy, but it is absolutely necessary to final success. Carelessness is the costliest habit a farmer can fall into, and trickery, while it may seem to succeed for a time, must cost more than it comes to in the end.-Connecticut Farmer.

SWINGING TROUGH.

Every Farmer Who Keeps Hogs Should

Examine This Device. The illustrations show a hog trough that is pivoted in the partition, and swings out into the walk to be filled, and is tipped back into the pen for the hogs to feed from it. One can thus clean out the trough and fill it

without molestation from the occupant of the pen, and will be in no danger of turning half the feed upon the hog's head, as is the case with the trough with a spout. The construction of the trough is fully shown in the cuts and needs no further explanation.-Farm Journal.

Simple Cure for Lockjaw. A writer in Clark's Horse Review gives his experience in curing lockjaw, in which he says: "If a nail is picked up get it out, of course, as soon as possible; then get a half pail of hot water—as hot as the horse can possibly stand it-pour in plenty of vinegar and also plenty of salt. This is all, only it must be so hot that at first when you put the horse's foot in it he will pull the foot out of the water; put in again and keep on doing so until you can hold the foot in steadily. Hold it in half an hour or longer and repeat it again after two hours. Do this at least four times or more the first day and repeat the process next day. In nine cases out of ten it will save the horse. It has been tried on man, and I used it myself on my own horse. Some one may say that this remedy is no good, but if I had a valuable horse it is the remedy I would try. Nothing will kill the poison quicker if taken in time."

Pasture-Making Is an Art. There is an art in making a good pasture that every farmer should turn his attention to. The pasture should be as well taken care of as any part of made as rich as possible. They should be seeded down with a large variety of grasses, those of different habits o growth, time of ripening of seed and of good, rich food value. To the farmer just about to seed down his land to pasture one thing essential above all others is the thorough preparation of the soil. The land should be well plowed and replowed, harrowed and reharrowed, so as to pulverize it

COMPLETELY PARALYZED

Physicians Are Astounded by Peculiar Case.

Young Man Stricken with Landry's Paralysis and Yet Recovers.

[From the Times, Philadelphia, Pa.] Stricken with Landry's Paralysis, and yet cured. That means but little to the average layman but it means a miracle to a physi cian. Such is the experience of O. E. Dallimore now a resident of Madison, N. J.

and a rare experience it is. "Yes, it is true that I had Landry's Par-alysis," said Mr. Dallimore to a reporter, "or else the most celebrated physicians of London were mistaken.

"It was on the 15th of March, this year," he continued, "when I was in New York city, that I first felt the symptoms of my trouble. I experienced difficulty in going up stairs, my legs failing to support me. I consulted a physician who informed me that I had every symptom of Locomotor Ataxia, but as the case developed he pronounced it a case of Landry's Paralysis and knowing the nature of the disease advised me to start for my home and friends. I gave up my work and on April 1st started for London Out. A well-known physician London, Ont. A well-known physician was consulted but I grew rapidly worse and on Saturday, April 7, several eminent physicians held a consultation on my case and informed me that I wan at death's door. having but three to six days to live, still 1 lingered on, by this time completely para-lyzed, my hands and feet being dead, I could hardly whisper my wants and could only swallow liquids. Oh, the misery of those moments are beyond all description and death would really have been a wel-

"Now, comes the part that has astounded the physicians. Rev. Mr. Gondy, a clergyman who visited me in my last hours, as he supposed, told me of the marvellous cures of paralysis that had been performed by Dr. Williams' Pink Pills for Pale People. started to take the pills about April 28 and a week after that felt an improvement in my condition. There was a warm, tingling sensation in the limbs that had been entire ly dead and I soon began to move my feet and hands, the improvement continued un-til May 28 when I was taken out of hed for a til May 28 when I was taken out of bed for a drive and drove the horse myself. By the beginning of July I was able to walk upstairs alone and paid a visit to Niagara.

"Slowly but surely I gained my old health and strength leaving Ontario for New York on October 11 and be ginning my workagain on October 11 and be ginning my workagain on October 26, 1894. Cured of Landry's Paralysis in eight months." To confirm his story beyond all doubt, Mr. Dallimore made the following affidavit.

Sworn and subscribed before me December 3, 1894.

Amos C. Ratheun, [Seal.]

Notary Public.

Dr. Williams' Pink Pills contain all the elements necessary to give new life and

elements necessary to give new life and richness to the blood and restore shattered
